

Annex B.

Fish farms in Danish sea water housing susceptible species to VHS. Due to the Danish health status as a nation free of IHN the sea farms have been inspected not less than once a year and sampled for laboratory examination of 30 fish not less than every second year. There have been no positive findings of VHS in the surveillance period. All Danish sea farms housing rainbow trout are placed in Category III for VHS, as marine strains previously have been isolated from wild living fishes in Danish marine water.

Fish Farm	Health category for VHS	Authorization number
Agersø Havbrug, Skælskør	III	89801818103485
